Clivus Multrum is the world's first and foremost waterless composting toilet. The first model was released in 1964 in Sweden and its use soon spread to other parts of Europe and the US.

While touring the US in 1980 with permaculture co-originator Bill Mollison I first encountered the Clivus Multrum (aka "Clivus") at the eco-futuristic Integral Urban House in Berkeley, California. Months later I saw a Clivus in the Grand Canyon National Park and two years later at the Centre for Appropriate Technology in Wales. Returning to Australia I became the W.A. distributor and enjoyed that role for several years during the 1980s. Almost 30 years later I decided to reconnect with the company and continue to promote the much loved Clivus, not only in WA but throughout Australia and Asia.

Clivus Multrum is suited to a wide range of climates and circumstances from Tiny Homes through to large public installations (CM20, CM40) in private (eg Caravan Parks) and public parks (State and National Parks). In between are suburban homes, mining sites, clubhouses, rest rooms & rest stops (CM10, CM14). We're experts in remote, waterless, public toilet solutions. We provide the simplest and most reliable, waterless toilet systems.

We're continually improving our designs to suit Australian conditions and needs. For example, we recently released the CM2, which is a great 2 person full time or 4 person part time composting toilet that is easy to install yourself and just as easy to use. At only AU\$900.00 this model proves popular for weekenders and as an economical and pleasant alternative to a drop toilet. It's perfect for Tiny Homes. It can also be used as a temporary toilet solution whilst building a house.

However, there are situations that require a different design solution and we cater for these with other brands including Ecolet, Kazooba, Nature-Loo and Sun Mar. For example, for a Tiny Home the Sun-Mar GTG Toilet is an alternative to the CM2 in situations where an approved system is needed. The newer CM2 is still undergoing the approval process and so is best where an unapproved system is acceptable. Competitively priced at AU \$1,400, the GTG is perfect for boats, Tiny Homes, cottages and cabins, motorhomes, RVs, farms, basements, warehouses, greenhouses, garages, barns, stables, trailers, mines, aircraft hangars, yurts, pools, sheds and more. Ask for our brochures on these toilets if you are interested.

We offer a complete solution to your compost toilet needs including toilet buildings, pedestals, seats, solar panels, electrical fixtures, and other accessories.

I look forward to helping you get a system that is just right for you!

Denis McCarthy

*Clivus Multrum has been designing and manufacturing waterless composting toilets in Australia for over 35 years*

- Australian owned
- Chemicals free & Waterle
- Easy to install
- Certified systems
- No polluting discharge
- Free Compost

Leading the way in waterless composting toilets for over 35 years

## CM2 & CM2 CS

Self-contained, easy to install and requiring minimal maintenance, the CM2 is ideal for those needing a temporary toilet solution whilst building a house, for weekenders or as an affordable alternative to a drop toilet. Unlike other systems, once installed the pedestal remains in place with only the internal compost chamber required to be changed.

### Key Features:

- Compact
- Easy to Install
- Low Maintenance
- Sits directly on the bathroom floor
- 100% waterless & 100% nature

### Specification

Capacity	Full time: 2 person use Part time: 4 person use
Power usage	12 Volt 5 Watt
Floorspace Required	On floor unit
Materials	LDPE
Dimensions	620 L x 395 W x 500 H mm
Water Consumption	Waterless
Solar Options	
Warranty PEDESTAL	2 years warranty

### What will you get?

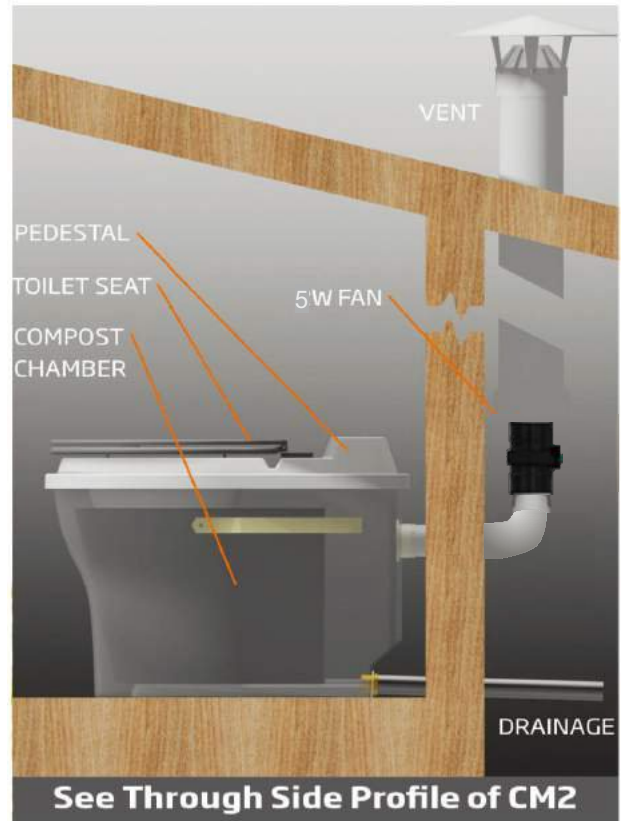

CM2 package includes:

- 2 x Composting chambers & lids
- White toilet seat & pedestal, also available in Black
- Ventilation system including 12 volt 5watt fan in housing and transformer\*
- Easy to follow DIY Installation and Maintenance manual.
- 1 x 125ml Nature Flush Enzymes & spray bottle
- 1 x Bag of wood shavings
- Plumbing fittings

\* If the transformer is not required, it will be replaced with a spare fan. The CM2 CS comes with above features and complete with Chamber Screens (White only).

# CM2 Range

Waterless Composting Toilet

The CM2 uses the process of organic decomposition to break down waste into safe compost. Removal of the compost chambers is as easy as opening the toilet lid, removing the compost chamber and replacing it with an empty one.

A 12volt 5watt fan aids the composting process and removes any odours.

Once installed there is no need to disconnect anything because, unlike other low-cost waterless composting toilets, the CM2 pedestal remains in place with only the internal compost chamber changing. The CM2's capacity can be increased by introducing additional composting chambers.

### Optional Extra: 40W solar package

- 40 Watt Solar Panel
- 40 Ah Battery
- 20 Amp Regulator suits both 12v & 24v fans

Additional chambers, replacement fans, solar package, drain kit & vent kit available.

- Free Compost

**The CM2 is a great 2 person full time composting toilet that is easy to install yourself and just as easy to use.** This model proves popular as a temporary toilet solution whilst building a house, for weekenders and as an economical and pleasant alternative to a drop toilet.

With a simple design, this waterless toilet system is great for the environment and has been installed in a variety of homes and settings from forest homes, suburban homes, properties (cattle, sheep, etc) and everything else in between. This system is also a great lesson for children about the impact of humans on the environment (girls and boys and young children quickly get over their 'Poophobia' to learn about the benefits) and will teach them to care for their surroundings for years to come. (That's a world we certainly want to live in!)

#### How does this 2 person waterless toilet system work?

Using the process of simple organic decomposition to break down waste into safe compost, the CM2 produces odourless compost (it will smell like rich, dark, moist and healthy garden soil).

#### How long does it take to fill up a container?

The CM2 comes with 2 x 32 litre containers (with a 25 litre capacity) that on average will collect about 2-4 weeks worth of material (depending on use). If you have more than 2 people using the system full time, these times may vary. After a few weeks of using the CM2 system you will have a good idea of how often the container needs to be emptied.

#### Where can I empty the waste?

This is a personal choice but ultimately all waste from the CM2 waterless composting toilet systems should be added to some form of composting bin, heap or container. This will eventually turn into usable compost that is great for your garden. Another option many customers take is to put the lid on the container and let the waste compost within the container itself. This usually takes around 60 days and then you are able to reuse the container.

#### Installation information

Once installed there is no need to disconnect anything because, unlike other low-cost waterless composting toilets, the CM2 pedestal remains in place with only the internal compost chamber changing. The CM2's capacity can be increased by introducing additional composting chambers. See video: <https://youtu.be/MI-9AI4Why8> ..

- Key Features:**
- Compact and self-contained
  - Easy to install
  - Low maintenance
  - Sits directly on the bathroom floor
  - 100% waterless and natural
  - 2 compost chambers are included for 2 people full-time.
  - More compost chambers can be purchased for increased capacity.

- Package Includes:**
- 2 x Composting chambers & lids
  - White toilet seat & pedestal
  - Ventilation system including 12 volt 5 watt fan in housing and transformer\*
  - Easy to follow DIY Installation and Maintenance manual.
  - 1 x 125ml Nature Flush Enzymes & spray bottle
  - 2 x Bag of Nature Quick Microbes
  - 2 x Bag of wood shavings
  - "Who Gives a Crap" Toilet Roll

*\* If the transformer is not required, it will be replaced with a spare fan.*
